

SANATOR ENABLES COLLABORATION BETWEEN PROVIDER ORGANIZATIONS AND HEALTH PLANS TO IMPROVE DATA QUALITY AND REDUCE OVERHEAD

Sanator is a collaborative platform that enables provider organizations and health plans to exchange provider information in an efficient process that reduces administrative overhead for both parties. Sanator eliminates unnecessary outreach by phone and fax to medical offices and gives providers a trusted platform to collect and distribute information to health plans.

COLLABORATE + DATA QUALITY MANAGEMENT

Collaborate with other organizations to verify provider profiles and to identify conflicts, gaps and changes. Sanator allows organizations to maintain control of their proprietary provider data, while sharing the burden of managing non-proprietary provider demographics and contact information.

Sanator clients see significant data quality improvement and a reduction in data entry and validation resources.

CHANGE THE PROVIDER DATA MANAGEMENT PARADIGM

Regulations that require health plans to publish up-to-date, accurate provider directories creates pressure on contracted provider groups that must participate in the collection and validation of this information.

The traditional approach to data collection that relies on periodic outreach by phone, fax and Excel spreadsheets is ineffective, expensive and unwelcomed by medical practices and provider management organizations.

Sanator Provider Registry represents a paradigm shift in the management and distribution of provider information. Sanator gives provider organizations a single, trusted service through which to manage and distribute their provider data.

Sanator subscribers manage their contracted provider's information in a central online portal. Provider data is never sold and never distributed to anyone other than the providers contracted health plans. Providers are assured that all health plans can receive their profile data without adding overhead at their practice locations.

BENEFITS OF SANATOR

- + IMPROVE DATA QUALITY
- + REDUCE ADMINISTRATIVE COSTS
- + BETTER PROVIDER RELATIONSHIPS
- + REGULATORY COMPLIANCE
- + PROVIDER DIRECTORY TIMELINESS

AUTOMATE + ROSTER REPORTING

Validating and correcting health plan roster files is a time consuming, laborious process. Sanator automates roster validation and reporting to health plans yielding significant time savings to the provider management organization. Provider groups upload their health plan roster requests to the Sanator portal and await confirmation that the file has been processed and prepared for submission back to the health plan.

INTEGRATE + INTERNAL SYSTEMS AND DATABASES

Sanator Private Instance (SPI) enables a provider organization to store additional information pertaining to its providers without sharing this information with other organizations, but with the option of accessing additional Sanator services such as credentialing and network analytics.

PROTECT + PROVIDER DATA PRIVACY

Medical offices are bombarded with unsolicited communications, many of these are a direct result of data collected under the guise of provider directory maintenance. Unlike other provider portals that rely upon marketing your provider's information to third-parties, Sanator is the only service that will never sell or distribute your provider data without your explicit permission to do so.

ELIMINATE + UNNECESSARY OUTREACH

Provider management organizations provide a broad range of business services, from credentialing to claims processing. The trusted relationship with your providers is the most effective channel to collect provider data for distribution to health plans. Providers organizations that leverage Sanator to exchange data with their contracted health plans relieve their providers of unnecessary, unauthorized data collection requests at their medical offices.

+ SANATOR PROVIDER REGISTRY IS CHANGING THE NATURE OF PROVIDER DATA MANAGEMENT
